

AP-7

Abrasive Control Valve

The Airblast AP-7 Abrasive control Valve 1/2" is used to provide precise metering of abrasive from the blast pot to the blast hose.

One fixed, and one movable stainless steel metering plate provide long life and a high degree of metering adjustment, ensuring maximum productivity without abrasive wastage.

The AP-7 Abrasive control Valve is best suited to blasting applications using expendable type abrasives, such as crushed glass and copper slag.

Airblast offers a full selection of metering valves. Contact Airblast to discuss which metering valve is most suitable for your specific application.
